

How Clean is the Water?

Feb. 22, 2017
Stormwater Summit

Garrett Artz, Executive Director

RiverLink

est. 1987

RiverLink promotes the environmental and economic vitality of the French Broad River and its watershed as a place to live, learn, work, and play.

Clean Water Drives Economic Success

Clean Water Drives Economic Success

- Vibrant Brewing Scene
- Nationally recognized destination
- More to come:
 - > Tiger 6 and > \$50M Invested
 - > Bond Approvals – Woodfin
- High quality of life attracts business

How did we get here?

- Bold Vision
- We planned – Wilma Dykeman Riverway Plan
- Community Participation
- Community/Political Buy In
- Execution – Where we are now

Is the Water Clean . . . enough to swim, etc.?

Point Source Pollution

A single identifiable source of pollution.

Nonpoint Source Pollution

Erosion, Land runoff, precipitation, atmospheric deposition, drainage, or seepage.

Where are we going & how to get there?

- Non-metrics answer – clear water after a storm
- Issues to address:
 - > Stormwater
 - > Point Source - Garbage
 - > Agriculture
 - > Construction and sediment
 - > Stream Restoration

How to get there? Approaches?

- Collective Impact – abandon own agenda for collective one
- 5 elements
 - > Common agenda
 - > Measuring results consistently
 - > Plan of action - mutually enforcing activities
 - > Open and continuous Communication
 - > Backbone organization(s) with dedicated staff

How to get there? Approaches?

- Collective Impact – See Stanford Social Innovation
- Existing collaborations:
 - > Stormwater Summit
 - > American Rivers Dam Removal Group
 - > Blue Ridge Forever (Accredited Land Trusts)
- Upper French Broad River Partnership?

Don't forget - Equity & Inclusion

- Communities of Color/Poverty
 - > Town “Nasty” Branch
- Everybody’s Environment
- Rural Communities

Erosion Sediment Control & Steep Slopes

- ▣ Erosion & Sediment Control
 - Permitting & Design
 - Challenges
- ▣ Steep Slopes
 - Constructed Slopes UDO 7-12-2
 - Steep Slope Ordinance UDO 7-12-4

Erosion and Sediment Control

- ▣ Permitting:
 - 500 sq. ft. land disturbance
 - Formal Plan
 - ▣ 10,000 sq. ft. land disturbance
 - 3rd party Inspector
 - ▣ 25,000 sq. ft. land disturbance
 - Re-vegetation Bond
 - ▣ 5 acres land disturbance

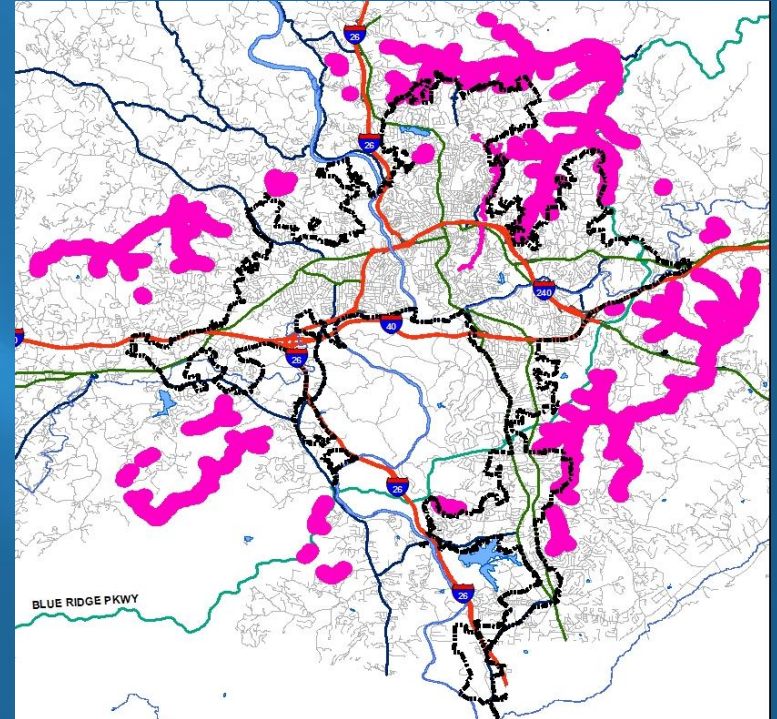

Erosion Sediment Control &
Steep Slopes

Steep Slopes & Ridgeline

- ▣ Steep Slope-
 - Zone A: 2220' to 2349'
 - Zone B: above 2350'
 - 15% existing grade
- ▣ Ridgeline-
 - Land within 100 vertical feet of ridgeline – designated on Ridge Top Map

Steep Slopes & Ridgeline

Limits of Disturbance Allowed

	Zone A (2220' - 2349')	Zone B (>2350')
Existing Grade	Maximum % Site Graded	
15-19%	80%	45%
20-24%	70%	40%
25-29%	60%	35%
30-34%	45%	30%
35-39%	35%	25%
40+	20%	15%

- ▣ Steep Slopes:
 - Limits of Disturbance
 - Road Construction
 - Constructed Slopes
 - Structure Height and Depth
 - Tree & Vegetation Preservation
 - Density
- ▣ All Slopes:
 - Geo-technical report required
 - ▣ >36% slope requires
 - ▣ High-Moderate Hazard on Buncombe County Slope Stability Index Map

Steep Slopes & Grading

Grading UDO 7-12-2

Slope	Spacing of 5' benches
50% (2:1)	No more than 20 vertical feet
33% (3:1)	No more than 35 vertical feet
25% (4:1)	No more than 45 vertical feet

Steep Slopes UDO 7-12-4

Slope Type	Maximum Slope	Maximum Vertical Height
Cut Slope	1.5:1	30 ft.
	2:1	40 ft.
	<2.5:1	30 ft.
Fill Slope	2:1	40 ft.
	<2.5:1	30 ft.

All slopes greater than 2:1 slope and 5' vertical height requires a Geo-tech slope certification.

Stormwater & Localized Flooding

Erosion Sediment Control & Steep Slopes

**Stormwater Control Measure
Operations & Maintenance
Facilitated Discussion**

The Challenge: Fund, Design, Build...

MAINTAIN so that the SCM continues to operate as designed and hopefully built.

- Who ensures/enforces maintenance in your communities?
- Is O&M codified?
- Who performs the work?
- How often?
- What issues are being encountered? Over-Mowing, Invasives, Clogging, Improper Chemical Application, Structural/Mechanical Failure, ...

GREEN INFRASTRUCTURE ON THE UNC ASHEVILLE CAMPUS

INTEGRATION
OF
ECOLOGICALLY
CONNECTED
SYSTEMS

Green Infrastructure

CAMPUS NATURAL SYSTEMS DIRECTLY SUPPORTING HUMAN HEALTH AND WELL BEING - BODY, MIND AND SPIRIT

- **PHYSICAL ACTIVITY- OPEN SPACE FOR RECREATION, TRAILS**
- **PEACE AND SERENITY- NOISE POLLUTION MITIGATION- ELECTRIC VEHICLES AND EQUIPMENT, PLACES DESIGNED FOR QUIET**
- **AESTHEICS, BEAUTY FOR BEAUTY'S SAKE**
- **THE CONNECTEDNESS OF ALL LIVING THINGS- WILDLIFE**

GREEN INFRASTRUCTURE

CAMPUS NATURAL SYSTEMS DIRECTLY SUPPORTING HUMAN AND PLANET SURVIVAL

- CLEAN AIR-DESIGN OF LANDSCAPES TO REDUCE USE OF SMALL ENGINES, ELECTRIC VEHICLES
- CLEAN WATER –STORMWATER MANAGEMENT, RAINWATER
- SOIL- CONSERVATION,RESTORATION, CARBON SINK
- OPEN SPACE/URBAN FORESTS
- BIODIVERSITY OF SPECIES AND HABITATS
- CLIMATE AND MICRO-CLIMATE
- FOOD- POLLINATORS, PERMACULTURE, EDIBLE LANDSCAPING

Education

**Food (for
people and
wildlife)**

INTEGRATED STORMWATER MANAGEMENT

MILLER COMPLEX LOW IMPACT DEVELOPMENT

- Permeable Pavement
- Vegetated Roof
- Bioretention cells
- Vegetated Swale
- Infiltration Basin
- Rainwater Cistern
- Pocket Wetland
- Permaculture Swales
- Soil Restoration

FUTURE DIRECTIONS: SMALLER SCALE

Current Project: OBSERVATORY WETLAND

Jan 2016

August 2016

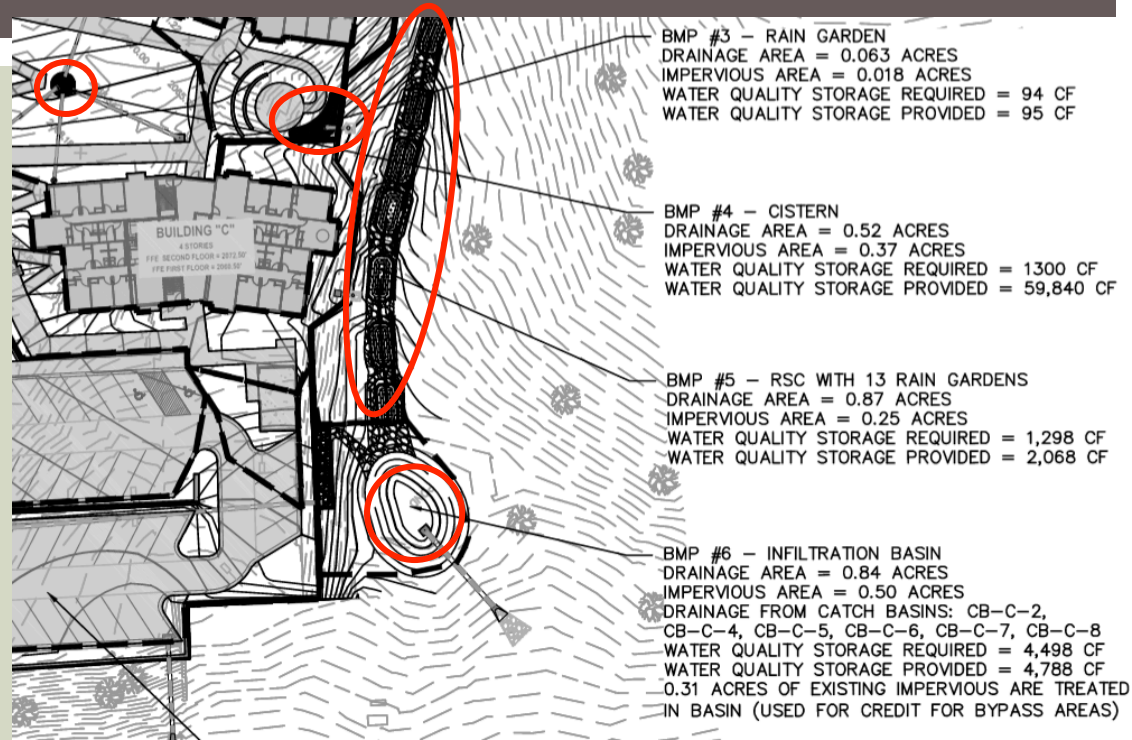

Feb 2017

FUTURE DIRECTIONS: NEW CONSTRUCTION PROJECTS

From UNCA Design and Construction Guidelines:

“Whenever practicable, collected rainwater should be re-used in toilet flushing or landscape irrigation. In addition, stormwater design strategies should give priority to infiltration of rainwater as close to the source as possible. ”

FUTURE DIRECTIONS: SOIL RESTORATION AS BMP

- Enhance compacted soils to improve porosity and nutrient retention
- Promotes root growth, microbial activity, and infiltration
- Can reduce runoff from 30-75%
- TSS:85%
- Undergraduate research opportunity

FUTURE DIRECTIONS: STORMWATER BOG

- Not typical site, stretching convention
- Simulate ground-fed fen/ bog
- Viewed as a re-use project
 - Serve as an outdoor laboratory for classes and research projects
 - Provide habitat for wildlife
 - Safeguard local genotypes
 - Grow plant material for research or reintroduction to natural habitats
 - Supplement geographically isolated natural habitats
